

KING SIZE HEADBOARD

Supplies		
Item	Quantity	Description
4'x8' Plywood	1	¾" Plywood
1x6x8'	3	Framing Lumber
1x10x8'	1	Framing Lumber
2x10x8'	2	Framing Lumber
4x4x8'	1	Framing Lumber
3" Slim LED Recessed Kit	2	
On/Off switch and wiring	1	
1 ¼" Pocket Hole Screws		
2 ½" Pocket Hole Screws		
1" Finish Nails		

Cut List

Cut List

Step 1

There are several pieces of this project that will be stained and most painted white. We will start with stained pieces. Cut boards to provided dimensions in the cut list. Stain the boards separately before assembling them together. This makes the job cleaner instead of painting and staining after everything is assembled. Attach the two boards together making the L shape. Repeat two times.

Step 2

Take 1 full (96") 1x6 board and place L shaped board on each side. Attach them using 1 ¼" pocket hole screws. Also attach the middle piece of plywood. Make sure its painted white before attaching.

Step 3

Then place another full size 1x6 board on top and attach it using wood screws from the top. If you prefer to put LED lights, you would need to cut the holes before attaching the upper board. Also keep in mind where to place on/off switch for the lights. This might require additional opening on the board.

Step 4

Now since the middle section is complete, attach the upper and lower section using 1 ¼" pocket hole screws.

Step 5

For the piece on top of the headboard, use nail gun with finish nails.

Step 6

Take 2x10 and cut to provided dimensions in the cut list. Using pocket holes attach the two boards together making an L shape shelf. You might want to rip the two edges with a table saw so that two boards connect evenly. You will need to make 2 exactly the same shelves and 2 mirrored shelves.

Step 7

Before attaching the shelves we will add 4x4 in the back so that we will have a solid wood to attach the shelves to.

Step 6

And finally attach the shelves at your desired height using the 2 ½" pocket screws. You're done.
